

Shed Move Preparation

We can transport any fully assembled shed under specific conditions, but we'll need a few pieces of information before we get started.

Customer Information

Please provide your full name, address, phone number, and email so we can get in contact with you.

Shed Details

First, we will require the address of where the shed is currently located, and where you plan to move the shed. We'll also need to know the length, width, framing, and overall height of the shed.

The shed will **require** 4x4 or 6x6 runners underneath the shed lengthwise. The runners need to be spaced maximum of 6 feet apart from the outside edge of one runner, to the outside edge of the opposite runner. For on-site moves, the spacing of the runners is not essential. The runners must be securely attached.

Photos

To help make this process easier, we require that the customer sends a few photos to help us determine if we can move the shed safely. We'll need photos of the shed itself, its current location, the location in which it will be moving, and the clearance at both locations. We require a foot of space larger than the shed on each side to access the shed, as well as 4 feet of clearance away from fencing, trees, etc. to pick up/drop the shed. Roadways and access should be clear of all branches, and ideally free of slopes and uneven terrain.

Pricing

For a shed move, we charge \$150/hour, with a minimum of 4 hours. We also charge mileage at \$4.25/km, that will be determined based on the addresses provided. We require a deposit of 50%, preferably paid by e-transfer. An initial site inspection, if needed and requested, will cost \$150 with half of that \$150 (\$75) being put towards the shed move price if we proceed with the job.

Have questions? Feel free to [contact us](#) if you have any questions regarding our shed moving process.
